

Dear Partner,

MediRox would like to inform you about some important updates and news listed in this Newsletter.

We are happy and excited to announce that as of April 1st, MediRox has a new website! We have a completely new page design with the intention to make it as useful for the user as possible as well as we have updated the information about our products. The whole team has been working hard to make the webpage just according to your needs, and we do hope it will serve you well. Read more <http://www.medirox.se/march-2016-medirox-new-website-launch/> We are still working on the downloads section, making sure that you get the updated and correct files, therefore if you have any requests, please send us an email to [info@medirox.se](mailto:info@medirox.se)

On February 23-24<sup>th</sup> we had a training for our Siemens customers in the Nordics, the Baltics and Russia – the idea was to focus on our product PT, which, to some evolving markets, is a relatively new and challenging product. During the course, both practical and theoretical aspects have been handled all fitting into two half-days with a warm dinner in the evening of day number one. It was a great opportunity to get to know our customers – the old ones and the new ones as well. Read more <http://www.medirox.se/march-2016-mediroxs-educational-event/> If you feel that it is something that you are in need of, please drop us a line to [info@medirox.se](mailto:info@medirox.se)

By having a new marketing team, we have more than ever been focusing on customer support with personalised training at our production site in Studsvik and had a training for our Baltic and EE customers. Some of our old customers needed to freshen up their memory and quite many practical questions arose as to how approach the products and we were glad to give this service to them. If you have any specific scientific question you can always email us to [info@medirox.se](mailto:info@medirox.se)

We are happy to announce that we have produced a new product version of PT Quick: PT Quick – or the golden standard PT test – is now available

### **MRX PT Quick, MRX943**

PT Quick in general:

PT Quick is an international method used worldwide when it comes to measure prothrombin complex. Quick is a clot based method and is sensitive to the K-vitamin dependent factors, and also factor I and V. PT Quick is suitable for the screening of factors in the coagulation cascade (especially together with the APTT-method). PT Quick is also suitable for monitoring patients on anticoagulant therapy.

Our product:

MRX PT Quick is highly sensitive to reduced factor levels of II, V, VII and X, which makes it the optimal selection of reagent when monitoring the patient's individual dosage of anticoagulant.

The uniqueness of the MRX PT Quick reagent is the excellent sensitivity of ISI close to 1.0.

The active ingredient in MRX PT Quick is the rabbit thromboplastin assisted by calcium.

MRX PT Quick is traceability to the most recent WHO reference thromboplastin preparation (RBT/05).

MRX PT Quick is available in 2, 4, 5, and 10 mL.

Wishing you a wonderful spring,

Yours Sincerely,

The MediRox Team
